

**AMENDMENTS TO THE CLAIMS**

Please amend the claims as follows.

1. (Currently Amended) A method of transmission of digital information in a digital broadcast system comprising a central transmission station and at least one decoder, the central station transmitting at least one transport stream comprising a stream of packets encapsulating data sections within their payloads, wherein at least one encapsulated section includes ~~[[ing]]~~ a ~~[[n]]~~ medium access control (MAC) address used to control the reception thereof by the at least one decoder, wherein the ~~access control~~ MAC address ~~being is defined dynamically assigned~~ by the central transmission station and communicated to said at least one decoder using a fixed internet protocol (IP) address in an address assignment message.
2. (Currently Amended) ~~[[A]]~~ The method as claimed in claim 1, wherein said at least one encapsulated section corresponds to at least one datagram section used to contain internet protocol data, the data contained within a datagram section also including the fixed IP address ~~an internet protocol address~~.
3. (Currently Amended) ~~[[A]]~~ The method as claimed in claim 1 ~~or claim 2, in which~~ wherein said at least one encapsulated section transmitted to said at least one decoder and identified by an access control address is communicated from the central transmission station to said at least one decoder via a telecommunications network.
4. (Currently Amended) ~~[[A]]~~ The method as claimed in claim 1 ~~any preceding claim, in which~~ wherein the address assignment message is sent in response to a ~~[[n]]~~ medium access control (MAC) address request sent to the central station by the at least one ~~[[a]]~~ decoder.
5. (Currently Amended) ~~[[A]]~~ The method as claimed in claim 4 ~~in which~~ wherein the ~~[[an]]~~ address assignment message is communicated back to the at least one ~~[[that]]~~ decoder from the central transmission station via a telecommunications network.
6. (Currently Amended) ~~[[A]]~~ The method as claimed in claim 4 ~~or 5, in which~~ wherein the MAC address request ~~message~~ sent by the at least one ~~[[a]]~~ decoder includes an internet protocol number identifying that decoder to the central transmission station.

7. (Currently Amended) [[A]] The method as claimed in ~~any of claim[[s]] 4 to 6~~, ~~in which~~ wherein the MAC address request ~~message~~ includes an operator identity value associated with the subscription of the owner of the decoder to the services proposed by an operator broadcasting information via the central transmitting means.
8. (Currently Amended) [[A]] The method as claimed in ~~any of claim[[s]] 4 to 7~~, ~~in which~~ wherein the MAC address request ~~message~~ includes an indication of whether the decoder wishes to receive messages in one of a unicast and a multicast mode.
9. (Currently Amended) [[A]] The method as claimed in claim 8 ~~in which~~ wherein the address assignment message sent by central transmitting station contains a unique access control address in response to a unicast address request and a shared control address in response to a multicast address request.
10. (Currently Amended) [[A]] The method as claimed in claim 9 ~~in which~~ wherein the unicast address is a dynamic address assigned at the beginning of a session, in response to the address request received from the decoder.
11. (Currently Amended) [[A]] The method as claimed in ~~any of claim[[s]] 4 to 10~~, ~~in which~~ wherein the MAC address request ~~message~~ includes an indication of whether the decoder will remain connected to receive data via a telecommunications network after the communication of the MAC address request ~~message~~.
12. (Currently Amended) [[A]] The method as claimed in ~~any preceding claim 1 in which~~ wherein the address assignment message further includes information to enable said at least one decoder to select a packet transport stream containing the data associated with the ~~access control~~ MAC address amongst a plurality of transport packet streams.
13. (Currently Amended) [[A]] The method as claimed in ~~any preceding claim 1 in which~~ wherein the address assignment message further includes information to enable said at least one decoder to select the service containing the data associated with the ~~access control~~ MAC address from a plurality of services within a transport packet stream.
14. (Currently Amended) [[A]] The method as claimed in claim 13 ~~in which~~ wherein the address assignment message further includes information regarding the data streams carried by that

service and identifying the data stream containing the packetised data associated with the assigned ~~access-control~~ MAC address.

15. (Currently Amended) ~~[[A]]~~ The method as claimed in ~~any preceding claim 1 in which~~ wherein the central transmission station dynamically controls which transport packet stream amongst a plurality of transport packet streams is used to carry encapsulated packet data addressed for said at least one decoder.
16. (Currently Amended) ~~[[A]]~~ The method as claimed in ~~any preceding claim 1 in which~~ wherein the central transmission station dynamically controls which service amongst a plurality of services on which encapsulated packet data addressed to said at least one decoder is broadcast.
17. (Currently Amended) ~~[[A]]~~ The method as claimed in ~~any preceding claim 1 in which~~ wherein at least some of the data encapsulated within a packet payload is encrypted.
18. (Canceled)
19. (Currently Amended) A method of communication of datagram packets in a digital communication network comprising at least one central control station and a plurality of remote terminals, in which the datagram packets include at least one ~~[[a]]~~ medium access control (MAC) address associated with one communication layer of the network and an internet protocol (IP) address associated with a second communication layer of the network, and in which the at least one medium access-control ~~MAC~~ address is ~~[[are]]~~ dynamically assigned by the central control station in response to a request from a remote terminal.
20. (Canceled)
21. (Currently Amended) Apparatus for transmitting a transport stream comprising a stream of packets encapsulating data sections within their payloads to a decoder, at least one encapsulated section including a ~~[[n]]~~ medium access control (MAC) address used to control reception thereof by a decoder, said apparatus comprising means for ~~defining~~ dynamically assigning the ~~access-control~~ MAC address, and means for communicating to said decoder the ~~access-control~~ MAC address using a fixed IP address in an address assignment message.

22. (Currently Amended) The ~~[[A]]~~apparatus as claimed in claim 21, wherein said at least one encapsulated section corresponds to at least one datagram section used to contain internet protocol data, the data contained within a datagram section also including ~~[[an]]~~ the fixed internet protocol address.
23. (Currently Amended) The ~~[[A]]~~apparatus as claimed in claim 21 ~~or 22~~, comprising means for communicating to said decoder via a telecommunications network at least one encapsulated section identified by ~~[[an]]~~ the MAC access-control address.
24. (Currently Amended) The ~~[[A]]~~apparatus as claimed in ~~any of claim[[s]] 21 to 23~~, comprising means for receiving from a decoder a~~[[n]]~~ medium access control (MAC) address request, said apparatus being adapted to communicate the address assignment message to the decoder in response to said MAC address request.
25. (Currently Amended) The ~~[[A]]~~apparatus as claimed in claim 24, adapted to communicate said address assignment message to said decoder via a telecommunications network.
26. (Currently Amended) The ~~[[A]]~~apparatus as claimed in claim 24, wherein the address assignment message contains a unique MAC access-control address in response to a unicast address request and a shared ~~control~~ MAC address in response to a multicast address request.
27. (Currently Amended) The ~~[[A]]~~apparatus as claimed in claim 26, wherein the unicast address is a dynamic address assigned at the beginning of a session, in response to the MAC address request received from a decoder.
28. (Currently Amended) The ~~[[A]]~~apparatus as claimed in ~~any of claim[[s]] 21 to 27~~, wherein the address assignment message further includes information to enable said decoder to select a packet transport stream containing the data associated with the ~~access-control~~ MAC address amongst a plurality of transport packet streams.
29. (Currently Amended) The ~~[[A]]~~apparatus as claimed in ~~any of claim[[s]] 21 to 28~~, wherein the address assignment message further includes information to enable said decoder to select the service containing the data associated with the ~~access-control~~ MAC address from a plurality of services within a transport packet stream.

30. (Currently Amended) The ~~[[A]]~~apparatus as claimed in claim 29, wherein the address assignment message further includes information regarding the data streams carried by that service and identifying the data stream containing the packetised data associated with the assigned ~~access-control~~ MAC address.
31. (Currently Amended) The ~~[[A]]~~apparatus as claimed in ~~any of claim[[s]] 21 to 30,~~ comprising means for dynamically controlling which transport packet stream amongst a plurality of transport packet streams is used to carry encapsulated packet data addressed for said decoder.
32. (Currently Amended) The ~~[[A]]~~apparatus as claimed in ~~any of claim[[s]] 21 to 31,~~ comprising means for dynamically controlling which service amongst a plurality of services on which encapsulated packet data addressed to said decoder is broadcast.
33. (Currently Amended) The ~~[[A]]~~apparatus as claimed in ~~any of claim[[s]] 21 to 32,~~ comprising means for encrypting data encapsulated within a packet payload.
34. (Canceled)
